

Khiem Trinh = 3844974, s3844974@student.rmit.edu.au

I come from a vietnamese background but i was born in Australia in 2001. I have two older siblings which makes me the youngest person in my family. I went to primary school and highschool in Melbourne, Australia. I studied at Simonds Catholic College through the years 2014 to 2019. I completed my VCE studying subjects; biology, accounting, english, further maths, business management and psychology. I can speak English and Vietnamese fluently and only a bit of Japanese. Though I do aspire to learn more languages. One fact which others might find interesting can include the fact that i like to play both video games and sport games such as badminton and basketball.

My personal interest in IT is data management. This is one of my ideal job fields in the future in which I want to work in.

My interest in IT began ever since I first used a computer back when I was a child. Getting my first laptop and playing games on it was what I spent most of my childhood doing and even now.

There is a person which inspired me further after I started using a computer. My brother who is 12 years older than me studied a bachelor of Information Systems and worked in many IT fields in different businesses and roles. Being able to do what he can is something which I want to work towards in the future.

I do not have many IT experiences besides completing work experience at a real estate agency under the IT supervisor. There I did numerous tasks which did include data management. This is why I would like to work in a data management field in the future.

I came to RMIT for multiple reasons. One reason is that it is convenient and close to where i live which makes transport easy for me. During my studies, I expect to learn skills which can help me thrive in the business field I desire to work in.
